

Cyber Security Solutions
Integrated. Proactive. Resilient.

LOCKHEED MARTIN 
We never forget who we're working for®

Between defending against cyber attacks and ensuring mission resilience, there is one important word: HOW

Cyber attacks never stop coming. Intrusions that put data, the mission, even lives at risk. At Lockheed Martin, we don't just understand cyber security. We live it. And we've brought together the right team, the right processes, and the right technologies to provide our customers with reliable, mission resilient systems that are always available.

Our proactive and mission-focused approach meets today's cyber security challenges and anticipates tomorrow's. We make sure that our customers' networks operate through attacks while threats are detected and rendered harmless. And by delivering proactive services, integrated solutions, and resilient systems, our customers can trust the information on their networks and trust that their missions are assured.

Integrating Security into Every Solution We Deliver

At Lockheed Martin, cyber security is more than just a core competency—it's a way of life. We understand it. We apply it. But more importantly, we deliver it through integrating security into everything we do, and every solution we develop. We have effectively refined an approach that prioritizes vulnerabilities and integrates existing point solutions, enabling robust, seamless, end-to-end defense. We aren't just reducing risks, we're providing fully reliable and trusted solutions.

Offering Experience and Proven Capabilities

We provide reliable and trusted solutions for securing an organization's information, systems, and networks, to ensure confidentiality, authenticity, integrity, non-repudiation, and availability. Our proactive cyber security approach enables the delivery of integrated solutions and resilient systems for seamless, end-to-end defense.

The Lockheed Martin **Center for Cyber Security Innovation** leads corporate efforts to centrally manage standardization of best practices, talent, and technology innovation.

The Lockheed Martin **Security Intelligence Center** is an enterprise security center which serves as the company's detection, identification, and response center for all security incidents and is operated by the Lockheed Martin Computer Incident Response Team (LM-CIRT).

The **Wireless Cyber Security Testing Laboratory** is a facility which allows defense and intelligence agencies to test and evaluate wireless systems on a Top Secret/Sensitive Compartmented Information (TS/SCI) network.

The **NexGen Cyber Innovation and Technology Center** is a global security asset and world class center with a cyber range for customer and partner collaboration, testing, and innovation.

- Red Team/Penetration Testing
- Cyber-forensics services
- Secure coding initiatives
- Training
- Cyber Security Architects
- Cyber Intel Analysts
- Experienced, trained, and certified information assurance professionals

Utilizing Best Practices and Rigorous Processes

At Lockheed Martin, cyber security begins with the customer's mission and requirements and ends with security solutions that are integrated, proactive, and resilient. What comes in between are rigorous and thorough processes for analyzing, developing, implementing and operating solutions.

Our teams review IT security management processes and make recommendations for augmenting them, as necessary, to help customers create organization-specific processes to ensure effective implementation of established security policy. At Lockheed Martin, we build information assurance throughout the entire system development and deployment lifecycle, including: planning, enterprise controls, design, development, testing, deployment and operations.

Treating Customers Like Valued Partners

Lockheed Martin is a global security company and for more than 30 years, has been a trusted provider of innovative technology solutions.

Today, we're bringing together the right talent, the right processes, and the right technology to address our customers' missions and requirements. Addressing the hard cyber challenges for our customers today and tomorrow is all a matter of HOW.
